♠♥♦♣ THREE CARD PRIME ♠♥♦♣

Three Card Prime Poker is exactly what it sounds like; a 3-card poker game. It features three ways to play and three ways to win. The Player may bet against the dealer, bet on the value of their cards, and bet on the color of the cards dealt.

The basic idea is that the player begins by placing an Ante bet and any optional side bets, is dealt three cards, and asked to examine his hand. He can either place a 'Play' bet equal to their 'Ante' or they can fold. If the Player folds, their hand is still used to determine the outcome of any side bets the player made. Once all 'Play' bets are made, the Dealer's 3-card hand is revealed. The best 3-card poker hand wins and any side bets are reconciled.

The dealer needs a Queen high or better to qualify.

THE BETS

The Ante and Play Bets:

These bets are played against the Dealer. The Dealer needs at least a Queen or better to qualify. If the Dealer does not qualify the Player wins even money on the Ante, and the Play bet pushes. If the Dealer does qualify, the hands are compared and the best 3-card hand will win. The Ante and Play bets pay even money unless the Player wins with a straight, Trips or Straight Flush whereby an Ante Bonus is paid to the Player.

The Ante Bonus:

An additional feature is the Ante Bonus. The Ante Bonus is paid to the Ante bet when the player wins with a straight, Trips or Straight Flush.

Straight: Three cards in sequence.

Pays 1 to 1

Trips: Three cards of the same rank

Pays 4 to 1

Straight Flush: Three cards of the same suit in sequence.

Pays 5 to 1

♠♥♦♣ THREE CARD PRIME ♠♥♦♣

The Optional Bets:

'Pair Plus':

Pair plus is an optional side bet placed at the same time as the initial Bet; (before any cards of 'the initial' deal are dealt). This bet cannot be played on its own. The Player must have an initial bet on the box in order for him to play that 'Pair Plus' is a bet on the possibility that the cards dealt to a Player will form a winning hand of a Pair, Flush, Straight, Trips or Straight Flush.

If the cards do not form any of the winning poker hands proposed, then the 'Pair Plus' bet loses.

Pair:

Pays 1 to 1

Flush: Three cards of the same suit.

Pays 4 to 1

Straight: Three cards in sequence.

Pays 6 to 1

Trips: Three cards of the same rank

Pays 33 to 1

Straight Flush: Three cards of the same suit in sequence.

Pays 35 to 1

'Prime':

Prime is an optional side bet placed at the same time as the initial Bet; (before any cards of 'the initial' deal are dealt). This bet cannot be played on its own. The Player must have an initial bet on the box in order for him to play that bet.

'Prime' is a bet on the possibility that the cards dealt to a Player are all the same color. If the Dealer's cards are also that same color it pays more.

If the cards are not all the same color then the 'Prime' bet loses.

The Winning hands of a Prime are paid according to the following odds:

Player Cards Same Color:

Pays 3 to 1

Player Cards and Dealer Cards Same Color:

Pays 4 to 1

Blind Bets:

Anyone who plays more than one box must play the second and subsequent boxes blind. When playing a blind box the player must play ANTE, PLAY and any desired side bet before any card is drawn.
